External Cabinet Heaters

Gas & Oil Fired Heaters

telephone **0116 288 4333** freephone **0808 108 7575**

airability.co.uk

External cabinet heaters combine innovative design with a proven four pass heat exchanger technology to provide a high efficiency cost effective and durable range.

External cabinets provide the ideal solution for a wide range of industrial and commercial applications where space or environmental criteria restrict the use of internally sited units. All units are IP44 rated purpose designed for external installation and are available in both vertical and horizontal configuration. All heaters are CE certified in accordance with EN1020.

Model Range

Vertical and horizontal Cabinet heaters are available as either gas or oil fired models.

- Sas fired cabinet heaters are suitable for use with Natural Gas (G20), most units can also be specified for Propane (G31)
- > Oil fired cabinet heaters are suitable for use with Class D gas oil (35 sec), most units can also be specified for Kerosene (28 sec oil)

Vertical freestanding models are available from 29kW to 380kW

Horizontal models from 58kW to 380kW

Specification

Cabinet

Cabinets are constructed from electrozinc coated steel with an inner heat shield and finished in a durable epoxy powder coated finish to form a rigid weatherproof casework suitable for outdoor installation. All cabinets are IP44 rated.

Air Distribution

volumes evenly across the full heat exchanger surface for enhanced life expectancy. Fans on models 30 to 85 are direct drive with a single phase motor whilst larger models are fitted with three phase motors compliant with directive 2005/32/EC

Standard heaters are supplied with a duct outlet and a return air spigot for connection to ductwork, a fresh air inlet louvre may be specified as an option.

Efficiency

Each heater within the range has been designed and developed with fuel efficiency in mind and efficiencies exceed the mandatory requirements of CE legislation.

BENSON

......

Options

- > Low ambient units for installations where external temperatures are below -5°C
- > High/low or fully modulating burners
- > Fresh air inlet louvres
- > Air inlet filters
- > Manual or motorised inlet dampers
- > Up-rated fan motor for increased static pressure

Applications

- > Factories
- > Warehouses
- > Workshops
- > Showrooms
- > Greenhouses

Flues

External cabinet heaters are supplied complete with a 600mm length of flue and terminal which allows the free discharge of flue gases directly to atmosphere.

Depending on the heater location it may be necessary to extend the flue to enable the point of discharge to be repositioned. Should this be necessary the diameter of any flue must not be less than stated in the data table.

Combustion Air Supply

External cabinet heaters are designed specifically for outdoor location and as such obtain necessary combustion air via the inlet louvres in the control compartment door. Where heaters are installed in very low ambient temperatures it may be desirable to duct the combustion air from the heated building to the heater via a combustion air connection. Where ducted combustion air is required a spigot will be provided, this option must be specified at time of order clearly stating which side the spigot is required.

Ductwork Connections

Supply and return air ductwork must be adequately sized and sharp reductions or bends adjacent to the heater connections should be avoided. Ductwork should always be connected via the spigot connections on the heater and all joints should be sealed to prevent air leakage and water ingress. Ductwork connections should be adequately insulated and both the ductwork and insulation should be weatherproof and water tight.

Warranty

First year parts and labour, second year parts and ten year time related on combustion chamber.

Vertical freestanding model

Horizontal model

Heat Exchanger

Four pass combustion chamber/heat exchanger assembly provides improved thermal efficiency in excess of 91% on most models and is manufactured from stainless steel for enhanced life expectancy.

The combustion chamber and heat exchanger are mounted to allow for therma expansion thereby avoiding undue stress and premature heat exchange failure.

Burner

automated forced draught burner complete with full safety controls, all burners are CE certified to EN676. High/low and modulating gas burners can be specified as an option on models 60 and above, a high low gas burner is supplied as standard on model 375.

Oil fired units are supplied complete with a fully automatic burner complete with safety controls and a factory fitted oil filter and fire valve. High/low oil fired burners may be specified on models 60 and above, a high low oil burner is fitted as standard on models 350 and 375.

Fue

natural gas (G20), most gas fired units can also be specified for use on Propane (G31)

Oil fired heaters are deigned to operate on Class D light distillate 'gas oil' having a maximum viscosity of 4.5c.St at 20°C (35 sec Redwood at 100°F). The burners have also been designed to operate on oil containing up to 7% bio diesel. Most oil fired heaters can also be specified to operate using Kerosene.

.....

Optimised Control

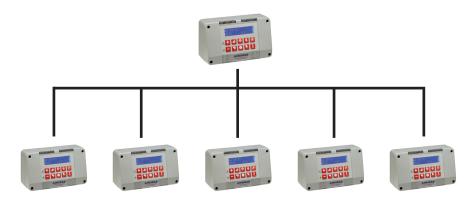

Benson external cabinet heaters are supplied ready for fully automatic operation and are complete with both safety and comfort controls. Each heater is fitted with a safety overheat thermostat and supplied with a time and temperature control system.

As standard, heaters are supplied with a remote SmartCom, an optimised control that includes a secure entry code facility, an optimised digital time switch with override facility, electronic day thermostat, and frost protection sensor. The control is supplied loose. Inter-connecting wiring between heater and remote control is by others.

All heaters have the facility of 'fan only' operation for summer air movement.

- > Self adapting optimum start and stop
- > Simple user friendly programming
- > Individual seven day programming
- > Day, night and frost (5°C) temperature settings
- > Three on/off periods per day
- > Easy set overtime and holiday periods Remote burner reset facility
- > Password protection to prevent unauthorised adjustment
- > Hours run and service data logging
- > Battery back up in the event of mains failure
- > High / low or modulating burner control (SmartCom MZ required)

Optional SmartCom MZ panel allows up to 16 panels to be linked for centralised control

Remote Sensor Options

Warm Air Sensors

Remote sensors for applications where the temperature sensor must be located away from the controller. Remote sensors can also be used for temperature averaging in conjunction with the controllers integral sensor.

Warm Air Duct Sensors

The sensor may be located in the return air duct (prior to any mixing with fresh air). Alternatively for make-up air applications requiring a constant supply air temperature the duct sensor may be located in the supply duct to control high/low or modulating burners (SmartCom³ MZ control

- 1. Gas lines must be adequately sized and reduced at appliance as required.
- 2. Standard external cabinets are designed to take combustion air directly from external source, however combustion air may be ducted from the heated space for installations where external ambients are very low. This option must be specified at time of order.
- 3. Noise levels measured at 5 metres from appliance.
